Variety: Vanmax

Exhibit A: Origin and Breeding History of the Variety

Vanmax originated as a single plant selection from Vanguard. The plant was selected for early maturity and large head size in the spring of 1961 in Dome Valley, near Yuma, Arizona.

In a Winter 1969-70 Imperial Valley trial the S1 progeny was outstanding for its increased earliness, head size, and improved uniformity compared to Vanguard, but also lighter in color. The decision to increase the line as a possible new variety was made on January 14, 1970.

Remnant seed of the original single plant selection was planted to a 400 foot row for increase in the summer, 1970. No offtypes were observed; the line was highly uniform for plant and bolting type under seed production conditions. A trial planting in the winter 1970-71 in the Imperial Valley indicated that the improved earliness and head size was maintained in comparison with Vanguard, but that the slight variation in heading ability innate to Vanguard under certain environmental conditions still persisted in Vanmax, though to a lesser degree.

Exhibit B: Botanical Description of the Variety

Seedling growth is medium rapid and vigorous. Early growth is as a rosette. Enfolding of the center leaves to form a head begins three to four weeks before marketable maturity is reached. As the head begins to firm the glossy dark green plants take on a dull medium olive-green hue. Resistance to bolting is moderate.

The mature plant is a crisphead type. The frame is medium large with frame leaves lying parallel to the ground. Wrapper leaves are medium high and loosely arranged around the head; the mature head is somewhat exposed (more so than Vanguard). Mature foliage color is a dull slightly yellowish olive-green (slightly lighter than Vanguard). Leaves are thick, appearing leathery, with smooth to undulated margins and smooth to slightly puckered surface.

The globe-shaped head is slightly flattened on the base and top, has a 6 inch diameter in cross-section, a medium core diameter ($1\frac{1}{4}$ inches) and length ($1\frac{1}{8}$ inches). The base is medium smooth; petioles are slightly ribby. Head weight is medium heavy.

The seed stalk is uniformly medium in height (contrasting to a variable medium to tall height for Vanguard) with a large, heavy panicle with very large seed production.

Seeds are black, almond-shaped, pointed at one end, with slight longitudinal furrows.

INSTRUCTIONS

GENERAL: The following publications may be used as a reference aid for completing this form:

1. C. M. Rodenburg, 1960, Varieties of Lettuce, An International Monograph, Instituut Voor de Veredeling van Tuinbouwgewassen, Wageningen, Holland.
2. L. L. Morse, 1930, Field Notes on Lettuce, published by Ferry-Morse Seed Co.

LEAF COLOR: Nickerson's or any recognized color fan may be used to determine the leaf color of the described variety. The following lettuce varieties may be used as a guide to identify the eight colors listed on the form.

<u>Color</u>	<u>Variety</u>
Red	"Salad Trim"
Reddish-brown	"Ruby"
Yellow	"Salad Bowl"
Yellowish-green	"Oakleaf"
Greyish-green	"White Boston"
Bluish-green	"Bibb"
Dark-green	"Imperial" group
Very dark green	"Deer Tongue"

PLANT SIZE: The following varieties may be used as a guide to identify the plant type size:

TYPE	COMPARABLE VARIETIES		
	SMALL	MEDIUM	LARGE
Cutting (leaf)	Boston-Curled	Prize Head	Grand Rapids
Stalk (stem)	Celtuce	--	--
Cos	Express	Parris Island	Giant White
Crisphead	Mignonette	Hanson (Merit)	Climax
Butterhead	Tom Thumb	Big Boston	Mammoth Butter
Latin	Sucrino	Creole	Deer Tongue

Variety: Vanmax

Exhibit D: Data Indicative of Novelty

Vanmax most closely resembles the variety Vanguard. The distinguishing features of Vanmax compared to Vanguard include:

1. slightly earlier marketable maturity.
2. slightly larger average frame and head size.
3. slightly more exposed head.
4. slightly lighter mature plant color.
5. under commercial lettuce production conditions
a lower frequency of non-heading variants.
6. a shorter, less variable in height, seed stalk.
